

Deactivation

X-333 PROCESS BUILDING

- Deactivation will be complete in 2024.

- The X-333 Process Building contains the largest of the process gas equipment including the massive '000' converters that weigh as much as 66,000 pounds.

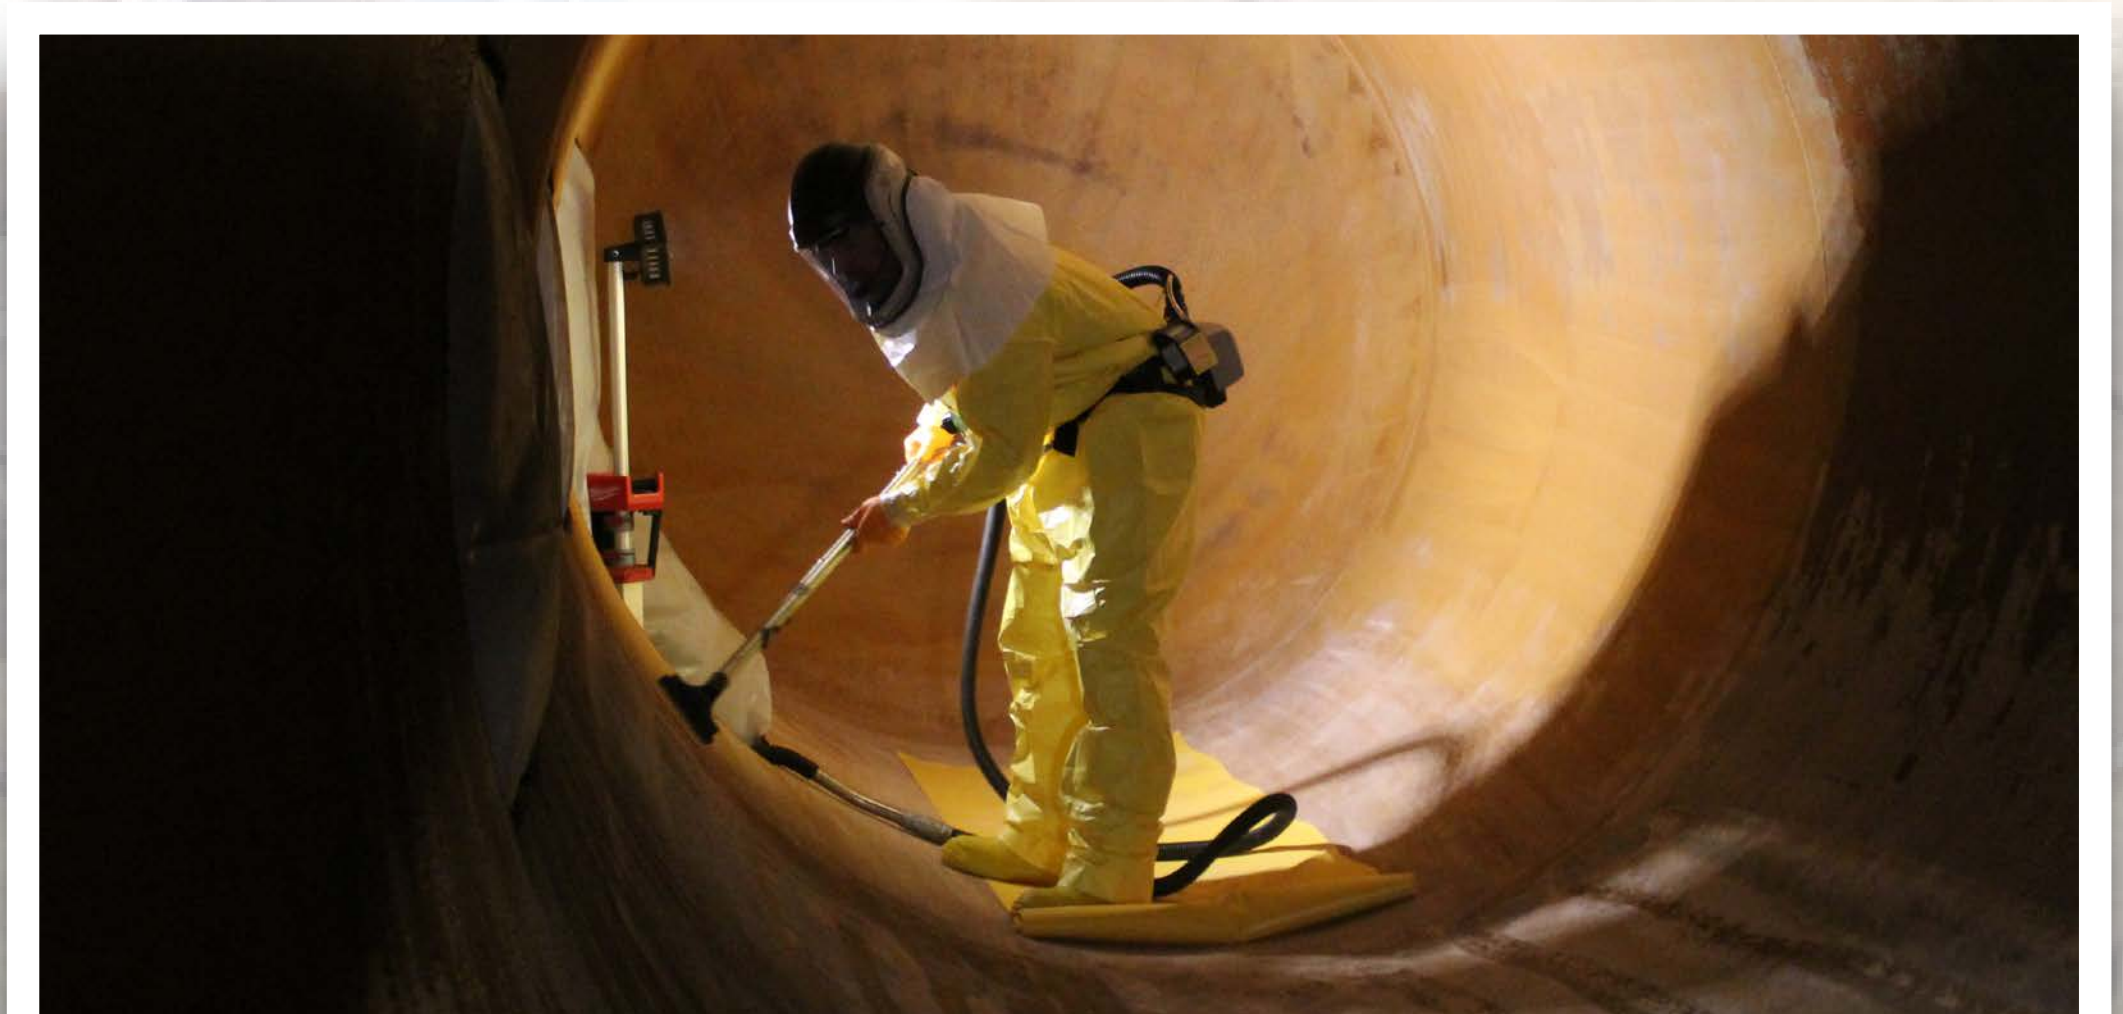

- The X-333 is the largest of the three process buildings with 66 acres of floor space under roof.

- The X-333 Material Sizing Area successfully segmented 626 '000' converters which resulted in over 41 million pounds of generated metal.

- NDA/CCI has successfully marked, measured and characterized over 45,000 items of process gas equipment components and piping in support of the of X-333 Process Building Characterization.

- The X-333 worked in conjunction with the two other process buildings at Portsmouth. It was considered the low end of the cascade.
