	Contractor Training
	FBP Training
	FBP One-time Training
	Expired Training / Not Working
	Expiring Under 30 Days
n/a	Not Required For Individual's Work Scope
	Not Completed Yet / New Hire
	Training is Current

**Matrix B Instructions:**

All color-coded rules are pre-loaded (Conditional Formatting).  
 You will need to manually change your revision to match your submittal number.  
 You will need to manually change your Project Matrix name to match your project.

**Adding New Training Modules:**

To add a training module that may be required from the J-13, you need to insert a column by right clicking one of the lettered columns at the top and select insert.  
 Then enter the name of the training module that is needed, and the frequency that training is required.  
 To adjust the formatting for the newly added module, go to the conditional formatting tab in the home menu, manage rules, and then adjust the rule to match the J-13 catalog duration  
 Alternatively, you could copy/paste formatting from another column with the same duration requirement.

**Filters:**

This spreadsheet comes equipped with filters. These are noted by the down arrows in each column heading.  
 The most practical use of these filters is to add/remove people from your training matrix. For example, if you have laborers that may be going from one project to another, with the intent of having different entries under this column, you can filter workers by active status on and off the project as needed. This becomes very helpful when you have several trades personnel.  
 Once the worker has been listed as "NO", you can then click the filter tab and uncheck the "NO" value and then click ok.  
 This removes the worker(s) with that designation from the active list, but not from the project.  
 This reduces the time and effort that may be required to look up the workers' training and/or add their information back into the matrix.  
 Once a worker is ready to come back to the active roster, you would go back to the filter tab and check the "NO" filter, and then click ok. This would bring all the filtered off workers back into the active roster.  
 Then change the applicable workers status that are returning to the projects active roster by changing their "Project Active" listing to "YES". Then turn the "NO" filter back off to remove the filter.

J13 Appendix #14 Option B
